```
1  /**
2  I love making the mobile application because I can touch my work
3  directly through my fingers. I can not choose between iOS and Android.
4  Both platforms are great and beautiful in its own way. Why not do both of
5  them. I also have some sense of UI/UX design and addicted to making and
6  using the app with good design. I am interested in technology related to the
7  mobile such as NFC and Bluetooth. Recently I got attracted to Bitcoin and the
8  technology behind.
